

IndoVyapar Vendor - Apple App Store Review History & Fixes

Document date: August 29, 2026

App: Indo

1. Repository branches (as of Aug 29, 2026)

Branch | Remote | Status / notes

****main**** |

Local main is behind origin/main. Use origin/main or vinik for the latest App Review fixes.

2. Review timeline summary

| Date | Version | Device | Submission ID | Outcome

1 | Aug 12

3. Rejection #1 - Version 1.0.0 (1) - Aug 12, 2026

Review device: iPad Air 11-inch (M3), iPadOS 26.6

Submission

3.1 Guideline 2.3.8 - Placeholder app icons

Apple said: App icons appear to be placeholder icons (default Expo/React logo).

Root cause: vendor-app/assets/images/icon.png was the default Expo template icon, not the IndoVyapar brand.

Fix implemented:

- Replac

Key files: vendor-app/assets/images/icon.png, vendor-app/app.json

Commits:

3.2 Guideline 2.3.3 - iPad screenshots (login only)

Apple said: 13-inch iPad screenshots only show the login screen. Screenshots must highlight core app functionality.

Root cause: App Store Connect metadata had login-only iPad screenshots.

Fix implemented:

- Capture

Key files: vendor-app/assets/app-store-screenshots/

Folder: /U

3.3 Guideline 4.8 - Sign in with Apple missing

Apple said: App uses Google (third-party login) but does not offer an equivalent login that meets 4.8 requirements (limited data, private email, no ad tracking). Sign in with Apple satisfies this.

Root cause: Vendor login had Google OAuth only; no native Sign in with Apple.

Fix implemented:

- Added

Key files:

- `vendor

Commits: f6616364 (add apple sign in), 7e489e7f, c66c4d2b (fix guideline 4.8)

3.4 Guideline 2.1(a) - Camera crash on iPad

Apple said: App crashed when reviewer used camera to add a product image.

Steps: Vendor app -> Add/Edit product -> Upload image -> Camera (iPad).

Root cause:

1. Missing
terminates

Fix implemented:

- Added

Key files:

- `vendor

Commits: 43f2c73e (Camera Error Fix), 3cabace4 (fix guideline 2.1.a)

4. Rejection #2 - Version 1.0.0 (5) - Aug 26, 2026

Review device: iPhone 17 Pro Max

Submissio

4.1 Guideline 4 - External Safari for sign-in

Apple said: User is taken to the default web browser (Safari) to sign in or register. Auth must happen in-app (or via Safari View Controller / ASWebAuthenticationSession).

Evidence from review: Screenshot showed Google OAuth opening in Safari with URL bar (accounts.google.com), not in-app.

Root cause:

- `startVe

Fix implemented:

- **Remo

Key files:

- `src/lib/

Commits: 9b2ca417 (BrowserRedirect Fix), 7bfb0347 (iOS App Fix), PRs #121-#125

4.2 Guideline 4.8 - Sign in with Apple still not acceptable

Apple said: Third-party login (Google) without equivalent Sign in with Apple option meeting 4.8 requirements.

Evidence from review: Customer Sign In screen (/login) with Google only - reachable from vendor app.

Additional issue reported: Apple sign-in stuck on loading spinner on Android.

Root cause:

- Custom

Fix implemented:

- **Sign i

Key files: Same as 4.1 + VendorSettings.tsx, app/api/vendor/me/route.ts (DELETE)

Commits: c66c4d2b, 1992a953 (add delete account), auth hardening commits

5. Additional hardening (Guideline 2.1 - incomplete functionality)

Apple rejects apps with fake or non-functional UI. These were fixed proactively:

Issue | Fix

Fake "Live

Key files: VendorSupport.tsx, VendorOrderDetail.tsx, VendorSettings.tsx, DocumentPreviewOverlay.tsx

6. Android-specific OAuth fix (Aug 29, 2026)

Issue: "Missing OAuth state" when Google login used Chrome Custom Tabs on Android (separate cookie store from WebView).

Fix: HMAC-signed OAuth state so callback validates without relying on oauth_state cookie when WebView and CCT use separate stores.

Commit: a6f9ac37 - Fix vendor Google OAuth Missing OAuth state on Android WebView

7. Build history (iOS)

Build | Notes

1.0.0 (1) |

Current repo: vendor-app/app.json -> buildNumber: "8", APP_RELEASE = '1.0.0.8'

8. Key commits (chronological)

Commit | Author | Description

`43f2c73e`

9. Suggested App Review reply (template)

> Guideline 4: Vendor sign-in now completes inside the app. Google OAuth uses ASWebAuthenticationSession (iOS) / Chrome Custom Tabs (Android) and returns to the in-app WebView. We do not open Safari for vendor authentication. Customer login is not accessible from the vendor app.

>

10. Pre-submission checklist

[] Deploy latest web to production (`origin/main`)

[] Upload

Generated from git history, App Store Connect rejection messages, and codebase audit.
